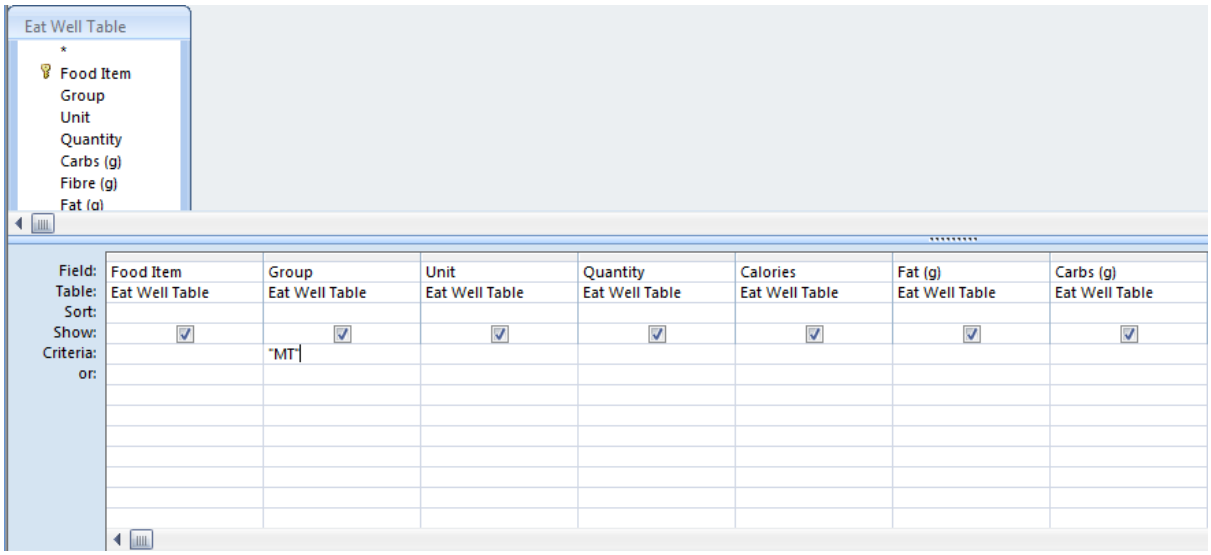
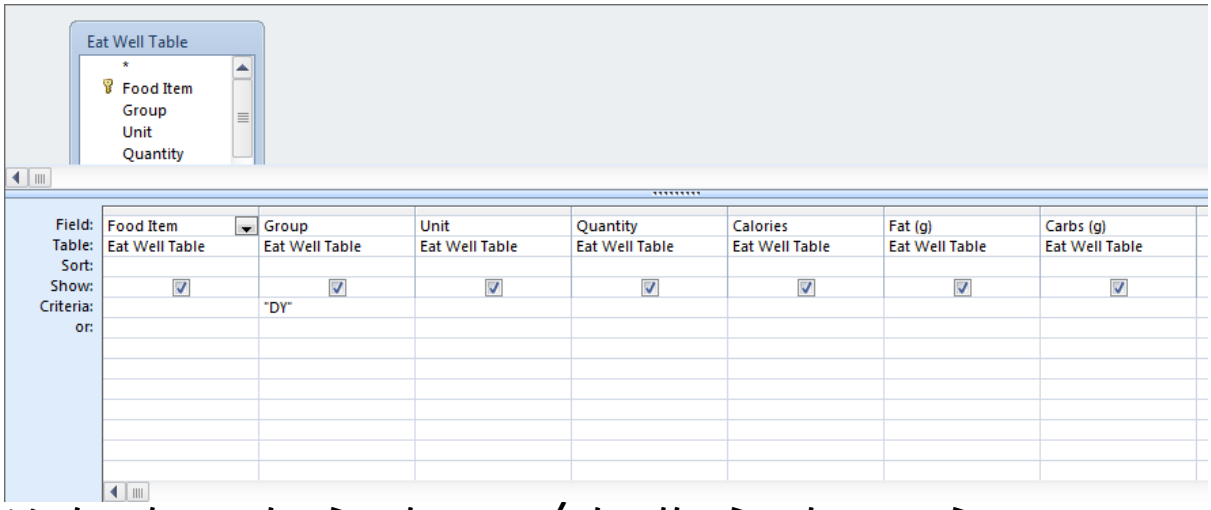
Query Reviews



My most popular food group for a main meal according to my results is Meat, and I plan to base the entire meal primarily on this. Therefore, it seemed appropriate to apply the criteria of Meat (MT) to my Query. This limits all results to only display foods in the Meat food group.

I also chose to display the fields shown above, as they seemed appropriate to what the audience would ordinarily like to know about the food. Similar details are shown on Food Packaging.



My least popular food group (also the food group for my dessert) for a main meal according to my results is Dairy, and I plan to incorporate this into my dessert in order to branch out the students' taste palette, engaging the students in a wide range of culinary cultures. Because of this, it seemed best to apply the criteria of Dairy (DY) to my Query. This limits all results to only display foods in the Dairy food group.

I also chose to display the fields shown above, as they seemed appropriate to what the audience would ordinarily like to know about the food. Similar details are shown on Food Packaging.
